USE OF AGENTS AND CONTROL DOCUMENTS TO UPDATE A DATABASE STRUCTURE

Abstract of the Disclosure

A method and system for updating a database structure. The database structure includes a

5   dynamically changing list of control documents. A control document specifies tasks to be

performed on the database structure. An agent finds an approved control document on the list

such as by looking into a view of control documents. Processing the approved control document

includes causing an execution of at least one task on the approved control document. Execution

of a such task includes updating of the database structure, and may be implemented by the agent

10 that found the control document or by another agent called by the agent.
